

Signal Tower – Assembly instructions

Div. 2 `Keystone`, MCR, NMRA

N, HO, S, O Scales

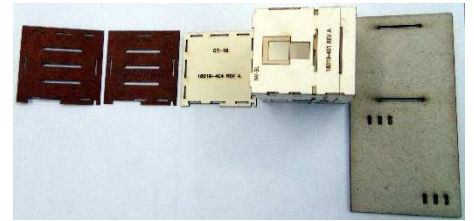

Trim outer door panels to fit inside door openings. Install glass on upper door and assemble doors.

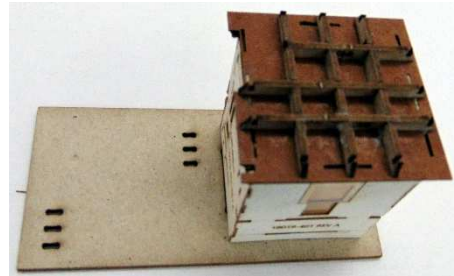

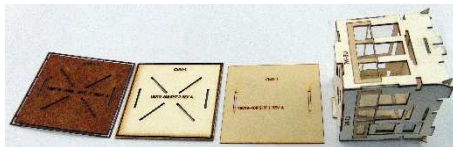

Place `glass` at windows; upper outside and lower inside the panel. Install doors.

Test fit wall panels. Assure bottom of door clears floor. Assemble first floor inner sides together and to floor. Install lower inner sides to base. Install first floor ceiling- CT-1, 2, 3.

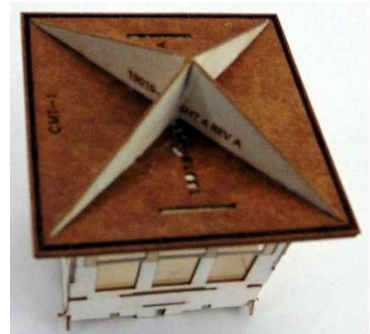

Assemble second floor inner sides. Mate to floor and ceiling - CMB-1, BMM-1, CMT-1. Test fit second floor to first floor, then separate.

Install second floor joists on top of first floor ceiling.

Install roof support to second floor ceiling.

Install first floor foundation (wider set) and siding on all sides.

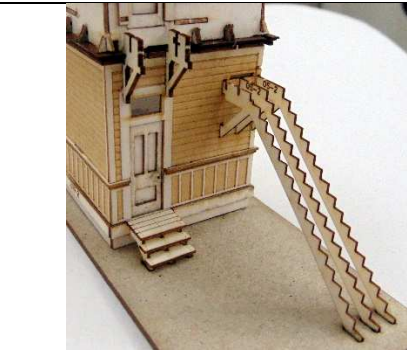

Install first floor belt trim at top of foundation.

Mate first and second floors. File and trim to get all the slots/tabs to fit may be necessary.

Install first floor stairs.

Install upper floor porch supports and long lower stair stringers.

Install short upper stair stringers.

Install landings and stair treads.

Install upper floor belt shingles.

Install railings.

Install roof and chimney.
